### NEUTERING & SPAYING

Neutering means de-sexing and the type of procedure is depending on the sex of your pet. It involves a castration procedure for a male, or a spay procedure for a female.

Because of the desperate plight of homeless animals we strongly recommend neutering cats and dogs, male and female if they reach maturity. The problem and sorrow of stray dogs and cats would be limited tremendously.

Neutering has a few advantages:

- There will be no more nuisance due to heat.
- It will prevent spraying by male cats.
- Male pets will have less tendency to run away and get into fights.
- It will prevent some diseases concerning the reproductive organs.
