## DIAGNOSTIC IMAGING & RADIOLOGY

Our portable X-ray machine produces excellent radiographs, which is essential to discover many medical and surgical problems. Soon we will be more capable of development more diagnoses with a new Ultrasound machine.

Diagnostic Imaging Services available at European Veterinary Clinic include radiology (x-ray imaging) and professional interpretation. Diagnostic imaging services are used by all services of the hospital for the diagnosis and monitoring of patients with all types of disease conditions. Our Veterinarian is provided with advanced training and experience in diagnostic imaging. The specialized equipment available at our hospital ensures that accurate, non-invasive, diagnostic imaging is available when your pet needs it.

Digital imaging creates increased efficiency and better diagnostic analysis, and improves timely decisions about patient care.
